### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. The application has been amended as follows:

In claim 1, on line 15, please delete ~~the~~ before the word --momentary value-- and replace with --a-- (to avoid the lack of antecedent basis, 112-2<sup>nd</sup> paragraph).

## **DETAILED ACTION**

### ***Specification***

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

As underlined above, the abstract should be limited to a single paragraph on a (one) separate sheet within the range of 50 to 150 words, because the current abstract seems to be too long on two separate sheets. Please make appropriate correction.

### ***Claim Objections***

2. Claims 1-33 are objected to because of the following informalities: all of the reference numerals in parentheses should be removed. Appropriate correction is required.

***Allowable Subject Matter***

3. Claims 1-33 are allowed.

***Reasons for Allowance***

4. The following is an examiner's statement of reasons for allowance:

The prior arts of record to Lindenmeier et al (US Patents 6,925,293 B2, 6,611,677 B1 & 6,430,404 B1) fails to teach or suggest a scanning antenna switching diversity system for FM radio for vehicles as cited in claim 1 of the present invention. Prior arts teaches the antenna switching diversity using a switch for a plurality of antennas and a corresponding controller; however, the novelty here is the present invention introduces a second interference detector for the time-integral determination of the interference signal contents in frequency gaps kept free of the wanted signal according to the signal standardization of the FM multiplex signals of the FM demodulated IF reception signal, and further with a logic circuitry for coupling to both of the first and the second interference detector for selecting a different switching position at the earliest possible point in time after the occurrence of a reception signal that has become unworthy of reception, which the mentioned prior arts are totally silent for these features.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Lindenmeier et al (US 6,169,888 B1), Shattil, and Schenkyr et al. (PTO-892 attached) disclose systems related the scanning antenna diversity with different approaches.
